PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience in Data Science, Machine Learning, and AI through industry internships and real-world projects. Experienced in building scalable, data-driven solutions and deploying machine learning applications. Proficient in Linux (Ubuntu, Arch, Fedora) and Windows environments, with a strong interest in building production-ready AI systems.

CORE SKILLS

Programming Languages: Python, C++, Java, SQL, Data Structure and Algorithms.

Frameworks & Libraries: PyTorch, Scikit-learn, NumPy, OpenCV, Flask, Streamlit.

Tools & Technologies: Git, Docker, AWS, Google Cloud Platform (GCP), REST APIs.

Databases: MySQL, SQLite, MongoDB.

ML & AI: Deep Learning, NLP, RAG, ML Pipelines.

INTERNSHIPS

Data Scientist, Celebal Technologies

May 2025 – July 2025

- Built a **student score prediction system** using **6,607 records** and **20 features** to predict student performance.
- Executed** EDA, feature engineering, and preprocessing pipelines across 5+ datasets.
- Optimized** 6 regression models using GridSearchCV/RandomizedSearchCV, evaluated via MAE, MSE, and R².
- Deployed** a real-time Streamlit application that reduced manual evaluation time by 50%.

AI & ML Intern, Upflairs Pvt Ltd

June 2024 - Aug 2024

- Trained 5+ supervised learning models, including SVM, k-NN, and NLP-based neural networks.
- Boosted model accuracy by **15%** through rigorous feature scaling and hyperparameter tuning.
- Developed** a responsive ML web app using 4 technologies (Flask, HTML, CSS, JS) for interactive predictions.
- Integrated** 3 application layers (frontend, backend, ML models) into an end-to-end real-time workflow.

PROJECTS

Qwen Ternary Quantization Framework | Python, PyTorch, LLM Optimization

Aug 2025 – Jun 2026

- Developed a ternary quantization pipeline to compress Qwen-1.4B model weights, reducing memory footprint by 1~60–70%.
- Benchmarked quantized vs full-precision models to evaluate latency–accuracy trade-offs.
- Optimized inference workflow for efficient deployment on consumer GPUs (RTX 3050 class).

Face Recognition Attendance System | Python, OpenCV, Computer Vision

Feb 2026 - Mar 2026

- Built a real-time attendance system using an OpenCV-based face recognition pipeline.
- Achieved ~95% identification accuracy under controlled lighting conditions.
- Automated attendance logging with structured UI updates and CSV-based storage.
- Implemented real-time face detection and identity matching for seamless attendance marking.

EDUCATION

B.Tech in Computer Science Engineering

Aug 2022 - July 2026

Amity University Rajasthan

CGPA 7.94

Class XII (Senior Secondary) RBSE

July 2020 - June 2021

Spectrum Global Academy, Shahpura

Percentage 91.67%

CERTIFICATIONS

- Oracle AI Vector Search Certified Professional** | Oracle (31 Oct 2025)
- Google Arcade Cloud – Trooper** | Google (2025)
- AWS Intermediate** | Udemy (2026)
